# Cyber Resilience Services

# ABOUT US

## Who We Are

The National Cyber Resilience Centre Group (NCRCG) is a strategic collaboration between the police, government, private sector and academia to help strengthen cyber resilience across the nation's small and medium-sized enterprise (SME) community.

Key to our reach are nine cyber resilience centres, led by policing, which operate across England and Wales to provide affordable, high-quality cyber resilience services to local organisations.

## Our Services

We offer nine cyber resilience services which are delivered by NCRCG's Cyber PATH student team, under the supervision of senior cyber security practitioners. Our services are regularly reviewed against the latest cyber crime data from government and law enforcement, to ensure they are tailored to meet the most pressing, contemporary cyber threats.

# ABOUT CYBER PATH

## What is Cyber PATH?

Cyber PATH is an elite talent pipeline for the next generation of specialists in cyber resilience.

Coordinated by NCRCG, Cyber PATH is a programme open to students in full-time higher education who want to help shore up the nation's defences against cybercrime and gain vital experience in a commercial setting.

## Why Students?

Cyber PATH allows SMEs across the country to access practical and bespoke support at an affordable rate.

Students are paid appropriately for their work whilst ensuring they have the flexibility and time to balance the programme's activities with their university studies. With unique workplace experience and BPSS vetting, Cyber PATH greatly enhances students' employability upon graduation.

This means that whilst you benefit from tailored cyber resilience services, we are equipping the next generation of cyber specialists with the essential skills, knowledge and workplace experience they need to best protect the UK economy.

**Cyber PATH allows smaller businesses to access practical, affordable and bespoke support at a highly subsidised rate.**

# CYBER PATH PROCESS

## Accessing our cyber resilience services

Our Cyber PATH team will arrange an initial conversation with you to agree your cyber needs and work out which service is most suited to you.

Following this, we will have a more in-depth discussion with you to explore the extent of the work you require, which can vary depending on the complexity of your organisation and systems. At this point, you'll receive a free, no obligation quote and, if you'd like to proceed, we will begin our work.

Once we have conducted our investigation, you will be provided with a full written report, including an Executive Summary as well as technical and non-technical findings. We will also present our report to you, either in person or virtually, so you can ask any questions and develop a more detailed understanding of the report's outcomes.

If you require support from an external provider to action any recommendations, we would be happy to direct you to our commercial partners, all of which are certified by the government-approved Cyber Essentials scheme, who will be able to support you.

Email [engagement@nationalcrcgroup.co.uk](mailto:engagement@nationalcrcgroup.co.uk) to enquire about our cyber resilience services.

1 Initial meeting to discuss if this service is right for you

2 Further meeting to scope specific detail

3 Quotation based on your specific requirements

4 Assessment takes place

5 Detailed report including an executive summary as well as technical and non-technical findings

6 An in-person or virtual debrief so you can understand exactly what we found and any risks to your business

## SECURITY AWARENESS TRAINING

Provides employees with a basic but effective understanding of their cyber environment and the confidence to recognise and draw attention to any potential security issues. It is delivered in small, succinct modules using real-world examples.

## FIRST STEP WEB ASSESSMENT

An initial assessment of your website to highlight its most pressing vulnerabilities. It is considered a light-touch review in comparison to the fuller Web App Vulnerability Assessment offered.

## CORPORATE INTERNET DISCOVERY

A comprehensive review of publicly available information about your business using internet search and social media tools. It is primarily focused on identifying any information that could be used by cyber criminals to craft an attack.

## INTERNAL VULNERABILITY ASSESSMENT

Identifies any weaknesses in your internal networks and systems, such as insecure WiFi networks and access controls, or opportunities to steal sensitive data.

## INDIVIDUAL INTERNET DISCOVERY

A comprehensive review of publicly available information about a potential or existing employee using internet search and social media tools. It is primarily focused on identifying any information that could be used by cyber criminals to target your business.

## WEB APP VULNERABILITY ASSESSMENT

A complete assessment of your website to highlight any vulnerabilities and their potential risk to your business.

## REMOTE VULNERABILITY ASSESSMENT

Identifies any weaknesses in the way your organisation connects to the internet.

## SECURITY POLICY REVIEW

An in-depth review of how your current security policy is written and implemented.

## CYBER BUSINESS CONTINUITY REVIEW

A thorough review of your business continuity plan and overall resilience to cyber attack.
